Certified service quality
Certified cost-benefit support quality

System Services

- Dual System Interseroh
- Industry-specific solutions Interseroh
- Transport packaging Interseroh
- Recycling Solutions Interseroh
- Paper sack recycling REPASACK

Collection of packaging

Take-back system for sales packaging.

Interseroh vario = Dual System Interseroh + Industry-specific Solutions Interseroh.

Dual System Interseroh – certified service quality

The German Packaging Ordinance dictates that sales packaging for private end consumers must be registered in a Dual system. With the Dual System Interseroh we offer you an effective solution with a fair and transparent contract, efficient service and competent contacts that advise you locally.

Industry-specific Solutions Interseroh – experience and legal compliance with certificate

You can integrate the sales packaging that accumulates at places comparable to private households such as, for example, hospitals, educational institutions, workshops, hotels, restaurants and the like in our Industry-specific Solutions Interseroh. You profit from certified price, benefit and support quality.

With our Industry-specific Solutions Interseroh we collect all packaging at your branch's collection points for you as we know exactly where which packaging accumulates. This has been confirmed for us by the renowned certification body ZER-QMS. We are therefore able to certify the mass flows separately per industry with ease – as transparent basis for your letter of representation.

Be on the safe side with verpackVkonkret

Interseroh is a partner of verpackVkonkret. We support our customers in legally compliant implementation of the Packaging Ordinance. The independent, neutral platform verpackVkonkret helps out on issues and questions such as, for example

- distinction between packaging and non-packaging
- determination of complete packaging volumes
- registration of volumes in industry-specific solutions in accordance with the ordinance
- examples and explanations on definitions, facts and circumstances

Profit from an optimum mix with Interseroh vario

Interseroh vario for the take-back of your used sales packaging is a combination of registration in the Dual System Interseroh and integration in the Industry-specific Solutions Interseroh.

variable	suitable for all industries
attractive	thanks to a 10-year edge in experience and knowledge of the industries
reliable	recognised system operator and products certified by TÜV Rheinland
individual	as customised solution
optimised	with fair value for money

Take-back system for transport packaging. Reliability and know-how.

**Opt for the competence of the no. 1 on the market
– and our certified service quality**

Interseroh currently has more than 4,000 industrial customers who have delegated the complete return and recycling of their sales packaging to us. We take over the organisation and coordination of the logistics as well as the monitoring and processing of the substance flows. This saves you and your customers - whether they are tradesmen, wholesalers or retailers – administrative and disposal work.

Your benefits at a glance:

- Top marks from TÜV Rheinland since 2007
- Unique network with more than 600 contractual partners for countrywide collection, transport and recycling
- Quality from long experience
- Keeping of the mass flow verification

Repasack system

– troublefree recycling of paper

The Interseroh collection system Repasack has also been certified and rated "very good" for its service quality by TÜV Rheinland. We collect your used paper bags, process them in our own recovery facility and return them to the paper-making industry as high-quality secondary raw material.

Gaining value from the throwaway. Interseroh Deposit System.

**The customised solution for your company
– from container to resource**

Interseroh guarantees beverage manufacturers and traders full compliance with the legal regulations on one-way deposits. Our deposit system offers you the complete range of services needed in the fields of disposal and data management.

Leaving you the time to concentrate on your core business.

Our services at a glance:

- Collection and transport of all disposable deposit beverage containers
- Counting in one of 12 counting centres around the country
- Voiding of the containers and recycling by material type
- Claim management and deposit account service

Consulting & disposal management

Site, warehouse and store disposal. Efficient and cost-optimised.

Analysis and optimised processing – for all disposal flows

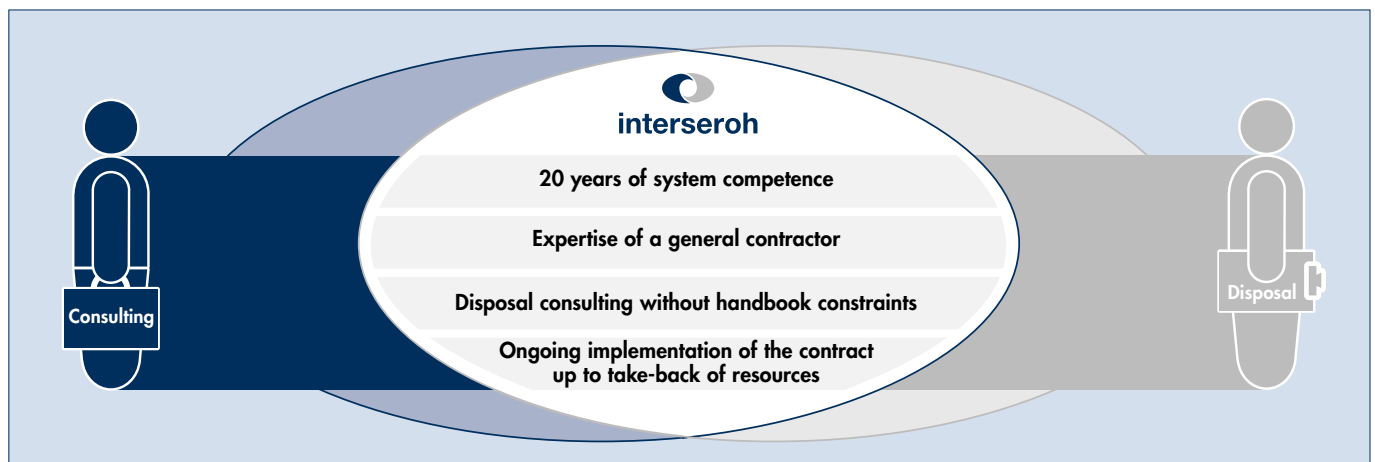

We are a step ahead of the times when it comes to matters regarding disposal. Interseroh offers TÜV Rheinland-certified consulting and disposal services – customised and independent:

- **Analysis of the current state** with recording of all types, quantities and costs of the wastes arising, all internal and external processes as well as the complete infrastructure (containers, logistical systems, etc.)
- **Target concept** with recommendations for improvement of logistics and waste separation, a transparent cost plan and a comparison of the costs of the actual state and target concept as well as a description of the accounting system
- **Joint implementation** of the target concept including take-back, recycling and disposal of the wastes, ongoing optimisation and cost control of the process chain as well as exact documentation and accounting of the services

Our one-stop complete offer comprises:

- **Complete disposal management including administration** of the complete waste chain: hazardous wastes, mixed wastes, packaging, separator contents, organic wastes, canteen wastes, standard and special wastes, etc.
- **Reliable and countrywide solutions** through exclusive cooperation with certified waste management companies in a countrywide network of around 600 independent partners
- **Unique combination of consulting and disposal management** with the comprehensive, branch-related expertise of our advisors for commerce, trade and industry and restaurant chains

Product recycling

Product recycling systems. Use our know-how.

Recycling of waste electrical and electronic equipment – professionally implemented

When it comes to the take-back and recycling of waste electrical and electronic equipment, you as manufacturer or distributor receive all the services necessary for you to fulfil your obligations from the WEEE Act from us:

- Registration, insolvency-protected guarantee and trusteeship according to the organisation Elektro-Altgeräte Register
- Take-back, recycling and keeping of the mass flow verification documentation

Take-back of empty ink and toner cartridges – with the biggest independent collection system

Interseroh delivers and collects your collection boxes and sees to sorting and preparation for recycling. The collection boxes can also be used to collect used mobile phones that are still in working order – with or without batteries – as well as CDs and DVDs.

Recycling of thermoplastic membranes – with long experience in the branch

With ROOFCOLLECT® as collection system you use our countrywide logistical system for the collection, transport and recycling of old thermoplastic roofing, swimming pool and pond membranes, waterproofing membranes and other industrial membranes.

As a partner of ROOFCOLLECT® we offer the means and competence for quick and smooth waste disposal.

Battery recycling – quick and safe

We collect empty dry batteries on behalf of the foundation "Gemeinsames Rücknahmesystem Batterien" in 11 German states. Our offer comprises correct and environmentally compatible transport services and storage activities at low cost.

Closed cycles and product innovations

Interseroh pooling systems. As individual as your company.

A benefit both economically and ecologically – reusable pooling with Interseroh

Use our pooling competence to optimise your supply chain effectively. And profit from the Interseroh benefits at the same time:

- **Individual pooling concepts:** We offer you reusable solutions with load carriers and transport packaging tailored to your supply chain.
- **Europe-wide availability:** We position our service centres on the basis of your distribution network and in this way guarantee short transport routes.
- **Systematic individual tracking:** We track the lifecycle of every asset in your supply chain from despatch from our depot to delivery to our depot.
- **Active pooling management:** We continuously check and improve the inventory range of the load carriers and transport packaging of all pooling participants.
- **Optimised pooling costs:** We investigate the main cost objects: assets, administration and logistics.

High-quality service features – tailored to your needs

Regardless of what your supply chain looks like – Interseroh offers you a customised reusable pooling with service and performance at the highest level:

- **Environment-friendly reusable products:** Our plastics from recyclates are flexible in use and underline the high economic and ecological standard of our pooling concept.
- **High standards:** We guarantee and document conformity to the particular hygiene and inspection standards required.
- **Linked shipments:** We optimise unit and mileage costs – and at the same time watch out closely for full truck utilisation and avoidance of empty kilometres.
- **Flexible accounting:** You specify the accounting terms to us. We adapt to your requirements.
- **Uncompromising transparency:** Our reusable platform supports pooling administration around the clock – on seven days a week. Every entry counts, every entry can be seen immediately. We process your data in real time.

Interseroh recycled-resource. Raw material of the future.

Innovative products from recycle compounds – in unique quality

Under "recycled-resource" Interseroh offers customisable plastic granulates on the basis of recyclates. This system uses secondary raw materials from household collection ("Yellow Bin") or from industry exclusively and transforms them in a unique process to materials whose quality is usually identical to that of new goods.

The different recipes for Interseroh recycled-resource are developed individually on the basis of your product specifications and processed using suitable production processes, additives and input materials to customised compounds. The prime uses of these materials are in injection moulding and blow moulding production processes, e.g. for sales packaging, bottle crates, reusable transport packaging and parts for the automotive industry.

Plastic granulates from Interseroh – the customised material

Opt for a material that meets the highest demands regarding quality, sustainability and cost-effectiveness:

- Individual, customised and adapted to various material requirements
- Tested, reproducible material quality
- Unique service from Interseroh – exact documentation of all resource data
- Upcycling and simultaneously complete conformity to the REACH regulation
- Technical support in the processing process if required
- Planning and cost stability
- Improvement in the environmental and climatic balance

Interseroh services. A synonym for quality Europe-wide.

Collection and recycling of packaging and waste electrical and electronic equipment – count on us

Profit from our long experience on the German market and use our extensive Interseroh services in Central and Eastern Europe as well. With national and local representatives, we can also take over your complete waste disposal management for you.

Recycling for climate protection: enhance your environmental image with us.

With our take-back and recycling solutions we contribute Europe-wide to a positive environmental and climate balance.

The ALBA Group consists of the two pillars ALBA and Interseroh and is one of the leading suppliers of recycling and environmental services and raw materials world-wide. With its ongoing activities and innovative recycling methods, Interseroh contributes significantly to the protection of the environment and climate. In total the ALBA Group saved 0.8% of the total German emission of CO₂ in 2010.

Use our strengths to your advantage:

- Around 20 years of systems competence and the expertise of a general contractor in the complete portfolio of products and services of a leading environmental services company
- All central Interseroh services for take-back and recycling in certified quality – rated "very good" by TÜV Rheinland
- Customised products on the basis of 100% recycled plastics with Interseroh recycled-resource – the unique process for the raw material of the future: procyclen®
